Professional Summary

Java Full Stack Developer with 1+ year of professional experience building production REST APIs, backend services, and responsive web applications on a multi-tenant SaaS platform. Strong in Java and Spring Boot with in-depth self-driven study of core Java internals — thread lifecycle, thread-pool execution, synchronization, and JVM memory management — and equally comfortable across the MERN stack (MongoDB, Express, React.js, Node.js) with Next.js. Experienced in MySQL and MongoDB data modelling, cron-based job scheduling, third-party API integration, Docker containerization, and GitHub Actions CI/CD on AWS (Amplify, Lambda). Delivers across the full SDLC in Agile teams — requirement analysis, code reviews, and production support.

Technical Skills

Languages: Java (Primary), JavaScript (ES6+), Python, PHP, SQL, HCL Terraform, Typescript

Core Java & Concurrency: OOP & design principles, Collections Framework, Multithreading (thread lifecycle, `Runnable`/`Callable`, ExecutorService & thread-pool sizing, task queueing, `synchronized`/locks, `volatile`, atomic classes, `CompletableFuture`, deadlock & race-condition handling), Streams API, Generics, Exception Handling, JVM memory model & garbage collection

Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, JWT Authentication, Maven | **MERN:** MongoDB, Express.js, React.js, Node.js

Frontend: React.js (hooks, component architecture), Next.js (SSR/SSG, API routes), Redux, HTML5, CSS3, TailwindCSS, Bootstrap, responsive UI

Databases: MySQL, MongoDB, Redis, JDBC, schema design, query optimization, stored procedures

Cloud, DevOps & Testing: AWS (Amplify, Lambda, EC2, S3, API Gateway, CloudWatch, IAM), Git/GitHub, GitHub Actions (CI/CD), Docker, Kubernetes, Linux, Nginx, cron jobs, JUnit, Postman, Swagger

Core CS & Practices: Data Structures & Algorithms, OOP, DBMS, Operating Systems, SDLC, Agile/Scrum, code reviews, technical documentation

Experience

Telgoo5 Inc. **Oct 2025 – Present**

Full Stack Developer *Noida, India*

- Designed and implemented inventory management REST APIs for SIM card and device trade-in modules on a multi-tenant telecom BSS/OSS platform serving global MVNOs, handling high-volume datasets and lakhs of production API requests.
- Built and maintained backend services with role-based access control, secure API design, and multi-tenant data isolation; designed relational schemas and optimized SQL queries in MySQL for warehouse and order workflows.
- Integrated third-party REST APIs (FedEx) for order fulfillment — automating shipment tracking, label generation, and delivery status processing with retry and error handling.
- Implemented cron-scheduled background jobs (cron expressions via `crontab` and Spring `@Scheduled`) for batch inventory synchronization, automated reporting, and periodic data reconciliation — with idempotent execution and overlap guards to prevent duplicate runs on long-running tasks.
- Deployed frontend modules on AWS Amplify and built serverless functions with AWS Lambda; automated build, test, and deployment through GitHub Actions CI/CD pipelines with Git-based pull-request code reviews in Agile sprints.
- Troubleshoot and debug production issues across backend, database, and deployment layers; maintain API and release documentation for delivery team.

Rnpsoft Pvt. Ltd. **May 2024 – Aug 2024**

Java Developer Intern *Bhubaneswar, Odisha*

- Built and deployed "Ms. Kalinga AI," a voice-powered news assistant serving 1,000+ readers using Java (Spring Boot) with REST API design, deployed on Linux servers.
- Developed and consumed REST APIs, integrated them with frontend modules, and used Postman for API testing and debugging; collaborated in Agile sprints using Git/GitHub.

Projects

CodeCampus — Coding & Assessment Platform | *Java, Spring Boot, React, MySQL, JWT, Docker, Judge0 CE* **GitHub**

- Built a full-stack coding platform with Spring Security + JWT role-based access (Admin, Teacher, Student, Company) supporting 150+ problems with 50+ test cases each, timed contests, and MCQ assessments.
- Handled concurrent code submissions with Java multithreading — a bounded `ExecutorService` thread pool with task queueing, per-submission timeouts, and graceful shutdown — executing untrusted code in Docker-isolated Judge0 CE sandboxes across 5 languages (C, C++, Java, Python, JS).
- Implemented exam proctoring (camera monitoring, tab-switch detection) and plagiarism detection using Jaccard, n-gram, and LCS similarity scoring.

EasyShop — Full Stack E-Commerce Platform | *Next.js, React, Node.js, MongoDB, Redux, Docker* **GitHub**

- Developed a full-stack e-commerce application with JWT authentication, product search and filtering, cart, and order management using Next.js, Redux state management, and MongoDB.
- Containerized services with Docker and automated deployment via GitHub Actions; configured auto-scaling and rolling updates for zero-downtime releases.

AWS CI/CD Deployment Pipeline | *GitHub Actions, Terraform, Docker, ECR, ECS Fargate, OIDC* **GitHub**

- Built an end-to-end deployment pipeline for a containerized application: GitHub Actions authenticating to AWS via OIDC (no long-lived keys), automated build and test on pull requests, and approval-gated releases.
- Pipeline flow — Docker image build → ECR (git-SHA tagging) → ECS Fargate behind an ALB with circuit-breaker automatic rollback on failed deployments; infrastructure provisioned with Terraform.

Certifications

Oracle Java Foundations – March 2025 [Certificate] | **AWS Certified Cloud Practitioner** – July 2025 [Certificate]

Education

B.Tech in Computer Science and Engineering — Sharda University, Greater Noida
